The authoraftertitle package

Matthias Bilger

2006/10/14

The \LaTeX{} commands \texttt{\author}, \texttt{\title} and \texttt{\date} are commonly used to set the author, title and date of the current document. Once set, these datums are used only by the \texttt{\titlepage} command and cannot be retrieved otherwise. The authoraftertitle package makes them everywhere available as \texttt{\MyAuthor}, \texttt{\MyTitle} and \texttt{\MyDate}; the original definitions of \texttt{\author}, \texttt{\title} and \texttt{\date} can be accessed using \texttt{\OriginalAuthor}, \texttt{\OriginalTitle} and \texttt{\OriginalDate}.
