Abstract

The biblatex-chem bundle is a set of styles for creating bibliographies using biblatex in the style of a number of common chemistry journals. The bundle comprises styles based on the conventions of the Royal Society of Chemistry, American Chemical Society and Angewandte Chemie. It therefore covers the journal styles of, for example:

- Angewandte Chemie
- Biochemistry
- Chemical Communications
- Chemistry – A European Journal
- Dalton Transactions
- Journal of the American Chemical Society
- Organic & Biomolecular Chemistry

amongst others.

1 Introduction

The biblatex package introduces a completely new method for controlling the creation of bibliographies using Bib\TeX. This makes a great deal of flexibility available when creating bibliographies, most of which is much more difficult with traditional Bib\TeX styles.

In order to use biblatex, an entirely new set of appropriate supporting styles are needed. This bundle provides a number of styles for chemistry, following the rules of some of the most important journals in the field.

2 The styles

The bundle currently contains four biblatex style files, each of which has its own demonstration document:

- The chem-acs style, which covers most American Chemistry Society journals.
• The chem-angew style, which covers Angewandte Chemie Chemistry – A European Journal.

• The chem-biochem style, which covers Biochemistry and a small number of other American Chemistry Society journals.

• The chem-rsc style, which covers all Royal Society of Chemistry journals.

The four styles can be used to follow the current layout rules of all of the journals currently published by the American Chemical Society and the Royal Society of Chemistry, plus the journals published by Wiley which use the Angewandte Chemie format.

The styles use the standard biblatex database requirements. This means that a database designed for traditional biblatex use may need some editing for optimal output. The accompanying example database biblatex-chem.bib shows examples of all of the supported entry types with common fields filled in.

3 Style options

All of the styles here add a small number of package options to the standard set provided by biblatex. This allows the styles to cover the variations seen between different journals without needing a very large number of files: the American Chemical Society in particular varies the exact details between journals.

The standard style options doi, eprint isbn and eprint, as described in the biblatex manual. However, these options are turned off as standard by the styles in the biblatex-chem bundle. This reflects the fact that these entries may be present in reference databases but are not generally included in published bibliographies. Note that doi values are printed for journal articles with no pages given, even if the doi option is false.

In common with the standard biblatex numeric styles, all of the styles in the bundle support the boolean subentry option. With this set true, entries of type set are given individual labels within the bibliography.

The use of article titles varies between individual journals. The boolean option articletitle is available is control this behaviour. The standard settings for the chem-acs, chem-angew and chem-rsc styles have this option turned off, while the chem-biochem sets this option true.

The format of the numbers used in the bibliography (the “bibliography label”) varies from journal to journal even if the same general style is used. The biblabel option allows the user to easily set the format used. This option takes a value from the list: parens, brackets, plain and dot.

The option boolean chaptxtle option is provided to allow flexibility for the inclusion of chapter titles for inbook and incollection entries. The standard setting is false for all styles in the bundle.

The use of full page ranges varies between journals and indeed between different papers in individual journals. The pageranges boolean option is available to turn on and off printing of full page ranges, thus allowing printing of only the first page even when the database contains the full page range. This option is set true as standard.
4 Related entries

References to related literature can be handled automatically by the Biber back-end. This is particularly useful for references to *Angewandte Chemie*, which should be given both to the German and English editions of the journal. The example database shows this in action, with a paper in the German version linked to one in the English edition (see the entry Dehnicke1981).

5 New styles

The current set of styles here is intended to form a strong base for chemists. However, there will be the need for other styles to be created. The package author welcomes suggestions for other styles for inclusion. It would also be good to keep all chemistry-related *biblatex* styles in one bundle. Others working on chemistry styles for *biblatex* are welcome to send them to the bundle maintainer so they can be incorporated here.

6 Errors and omissions

Suggestions for improvement and bug reports can be logged in the package issue database, found at https://bitbucket.org/josephwright/biblatex-chem/issues, or can be sent by e-mail to joseph.wright@morningstar2.co.uk.

Change History

3
v1.1f
General: Correct formatting of 
report entries in chem-acs style 3
v1.1g
General: Fix issue with inbook 
entries which lack distinct 
author and bookauthor . . . . . . . . 3
v1.1h
General: Fix appearance of author 
names in text when exactly two 
authors are given . . . . . . . . . . . . 3
v1.1i
General: Correct treatment of 
prefixes with acs style . . . . . . . . 3
v1.1j
General: Update styles to use 
related information if available 3
v1.1k
General: Fix error in name 
formatting with biochem style . . . 3
v1.1l
General: Fix extraneous comma in 
author list with rsc style . . . . . . 3
v1.1m
General: Move position of edition 
for book records in angew style 3
v1.1n
General: Improved approach to 
removing commas from journal 
titles in Angew. Chem. style . . . 3
Use \mkbibitalic not \mkbibemph in styles . . . . . . . . 3

v1.1o
General: Track biblatex changes . . 3
v1.1p
General: Ensure style works with 
both backends . . . . . . . . . . . . . 3
v1.1q
General: Omit language field in 
bibliography . . . . . . . . . . . . . . 3
Print year only for date fields . . 3
v1.1r
General: Track biblatex core 
changes . . . . . . . . . . . . . . . . . 3
v1.1s
General: Remove a stray space . . . 3
v1.1t
General: Improve formatting for 
online entries in acs and 
biochem styles . . . . . . . . . . . . 3
Update some internals . . . . . . 3
v1.1u
General: Update some aspects of 
name formatting . . . . . . . . . . . 3
v1.1v
General: Documentation tweaks . . 3
v1.1w
General: Bring related support in 
line with biblatex core . . . . . . . 3
v1.1x
General: Better formatting when 
article titles are included . . . . . 3
v1.1y
General: Add a missing space . . . 3
