The **footnotebackref** package

Back referencing from footnotes

Holger Lange

July 1, 2012

1 Introduction

The **footnotebackref** package allows the creation of hyperlinks from the footnote at the bottom of the page back to the occurrence of the footnote in the main text. The references and hyperlinks are created by the **hyperref** package.

2 Usage and Options

To use the package just type `\usepackage{footnotebackref}` in the preamble of the document. There are two options to format the links:

- **symbol**: Hyperlinked symbol between the footnotenumber and the footnotetext (e.g. \( \uparrow, \Delta \) or \( \wedge \)).
  - Default: no symbol
- **numberlinked**: This boolean indicates whether the footnotenumber is also a hyperlink or not.
  - Default: true

The package options are specified as key value pairs (\texttt{optionname=value}). If they are omitted the default values are used.

3 Example

The example shows an included symbol as hyperlink.

\begin{verbatim}
\documentclass{article}
\usepackage[symbol=\$\wedge\$,numberlinked=false]{footnotebackref}
\begin{document}
Some text with a footnote
\footnote{The first footnote.}\ \textbackslash\textbackslash
Text with the second footnote
\footnote[4]{The second footnote.}\end{document}
\end{verbatim}
