If you want to report any bugs or typos and corrections in the documentation, or ask for any new features, or suggest any improvements, or ask any questions about the package, then please do not send any direct email to me; I will not answer any direct email. Instead please use the issue tracker:

https://github.com/vafa/bidicontour/issues

In doing so, please always explain your issue well enough, always include a minimal working example showing the issue, and always choose the appropriate label for your query (i.e. if you are reporting any bugs, choose ‘Bug’ label).

Contents

1 Introduction 1
2 Documentation 1

1 Introduction

The contour package allows you to have colored contour text; unfortunately this package does not work together with bidi package; in addition its outline option does not support xdvipdfmx driver.

The bidicontour package is a re-implementation of contour package adding bidi support; it also adds support for xdvipdfmx driver when you use outline option of the package.

2 Documentation

All the commands of contour package are prefixed with bidi in bidicontour package; for instance instead using \contour command; you will need to use \bidicontour command. You must always load bidicontour package before bidi package (or any other packages that uses bidi package internally like xepersian package).
